1	A1 Lectin 5 ml	Each	Human red blood cells possessing the A antigen can be broadly subdivided into two main subgroups namely A1, and A2 based on their reaction with A1 lectin. A2 subgroups comprises of weaker subgroups of A such as A2, A3, Ax, A4, A5, A6, Ao etc. Group A red blood cells which agglutinate with Anti-A1 lectin are classified as subgroup A1, whereas red blood cells which do not agglutinate with Anti-A1 lectin are classified as subgroup A2. It is estimated that about 80% of the group A population are A1, and the remaining A2 or weaker. Anti-A1 lectin is especially useful in selecting blood for an A2 or A2B recipient whose blood may contain Anti-A1 antibodies. (5ml)	ASL
